

Dear colleague,

Are there animal-free methods to test the potential harmful effects of (mixtures and complex) chemical substances on our health? A consortium of knowledge institutions and companies researched and developed possible methods in the past four years. And with success! Therefore, we would like to invite you to the **final symposium 3R TOXFLOW 'Next level non-animal testing'** on **Friday 2 December 2022**. Discover what we can offer and how we can continue this innovative research with you. Will you attend our event?

### 3R TOXFLOW

Within the 3R TOXFLOW project, funded by EFRO (Kansen voor West) and NC3R, we have developed reliable animal-free testing methods to assess possible negative health effects of chemicals. The methodology is a combination of laboratory tests and data science solutions. The unique feature of this research is that complex mixtures of chemical substance can also be assessed. In this way, 3R TOXFLOW makes an important contribution to the policy to stimulate the transition to animal-free research in and outside the Netherlands.

*Marcel Levi*

*Diederik Jekel*

## What to expect?

**Prof. Marcel Levi**, President Executive Board of the Dutch Research Council (NWO), will give a keynote about the broader context of animal-free testing and research. There will be presentations and demonstrations on the research results, and we will discuss the possibilities of a successful implementation of the newly developed methods. We will conclude with a panel discussion in which the attendees together with various experts will reflect on the research and the transition to animal-free research in an interactive way.

The symposium will be led by science journalist **Diederik Jekel**. During the day you will have plenty of opportunities to network with peers and colleagues from (inter)national organisations.

## Practical Information

Date: **Friday 2 December 2022**

Time: 10:00 – 16:00 hrs [entrance from 9:30 hrs) followed by networking till 17:00 hrs

Location: [Media Plaza](#), Jaarbeurs, Utrecht

For: Organisations, researchers, policy makers, regulatory authorities, NGOs and all other organisations that are using or are involved in non-animal testing methods

Do not forget to reserve the date in your agenda! And to share it within your network. You will receive the invite with a full program in your mailbox in September.

We wish you a nice summer and look forward to meeting you on 2 December!  
With warm regards,

The 3R TOXFLOW Consortium
